Example 1:

Sequencing quality as listed in .fastq file: F

ASCII number for character “F” (can be checked in the ASCII table): 70

$\text{ASCII} = Q + 33 \Rightarrow Q = \text{ASCII} - 33 : Q = 70 - 33 = 37$

The quality of the nucleotide is 37

Example 2:

Sequencing quality as listed in .fastq file: ,

ASCII number for character “,” (can be checked in the ASCII table): 44

$\text{ASCII} = Q + 33 \Rightarrow Q = \text{ASCII} - 33 : Q = 44 - 33 = 11$

The quality of the nucleotide is 11
